

KEYLOGIC

Unlock & Empower

Energy & Environmental Technology Management

Green Energy

Today's cutting-edge energy and environmental technologies hold great promise to help organizations implement business practices and technologies that lead to energy efficiency and sustainability. But it takes specific technical and market expertise, along with a firm grasp of rapidly evolving best practices, to turn that promise into reality. At KeyLogic, we see the potential in innovative energy and environmental technologies — and we can help you unlock it in the way that best enables your mission.

If you're seeking to improve the energy efficiency of your organization, our experienced professionals can help you select the right technology to cut carbon emissions, maximize the business value of your implementation, and comply fully with sustainability mandates. And if your agency is responsible for the thought leadership and research initiatives that are taking these technologies to the next level, we can help you plan and execute productive R&D programs that lead to commercially viable technology.

Look to our engineers, scientists, and consultants for timely support in meeting your near-term environmental compliance requirements and long-term mission objectives related to energy efficiency and sustainability. With significant background supporting the R&D objectives of the U.S. Department of Energy and the U.S. Environmental Protection Agency, we understand the relative strengths and weaknesses of available technologies, and we can bring you informed, objective advice about their functionality, cost, and commercialization potential.

From Energy Star to Green IT, from Smart Grid to energy auditing, and from carbon sequestration to greenhouse gas emission analysis, when you work with KeyLogic you'll have the expertise you need to increase the effectiveness of your decision-making process with both qualitative and quantitative information — before you invest.

Consider what our world-class Energy and Environmental Technology Management offering can help you accomplish:

- **Efficient Compliance.** You can successfully address important sustainability mandates and regulations without losing your focus on the core mission.
- **Reduced Risk.** You can access decision support and subject matter expertise at the right time to make the right choice, and tap into monitoring and oversight assistance to enhance ROI over the long term.
- **More Productive R&D Programs.** We can help you assess markets, select the best technologies for R&D activities, and successfully practice the art and science of R&D project management.
- **Cost Savings.** As you implement environmentally-friendly technologies, you can reap the financial benefits of energy-efficient data centers and more reliable systems.
