Intelligence Community Support

The complex nature of the Intelligence Community's mission requires world-class technical and research expertise. And, it must operate in a diverse global environment — one with ever-changing social, political, technical, and budget factors.

We have supported a variety of agencies within the Intelligence Community on multiple contracts. We have provided subject matter expertise in a variety of technical disciplines: systems engineering, signals intelligence analysis, cyber intelligence analysis, geospatial metadata analysis, and program management. We have also provided technical training, such as instructing Service members in Find, Fix, and Finish operations.

KeyLogic team members supporting the Intelligence Community in CONUS and OCONUS locations strive to meet our customers' missions with the highest quality, timeliness, and cost-effectiveness. In this critical sector, success is the only option.

Our established capabilities include:

- Systems Engineering
  - Systems Integration
  - Independent Verification & Validation (IV&V)
  - Software Engineering/Development
  - Training
  - Deployment Services
  - Information Assurance
- Analysis
  - All-Source Analysis
  - Geospatial Analysis
